

DONER

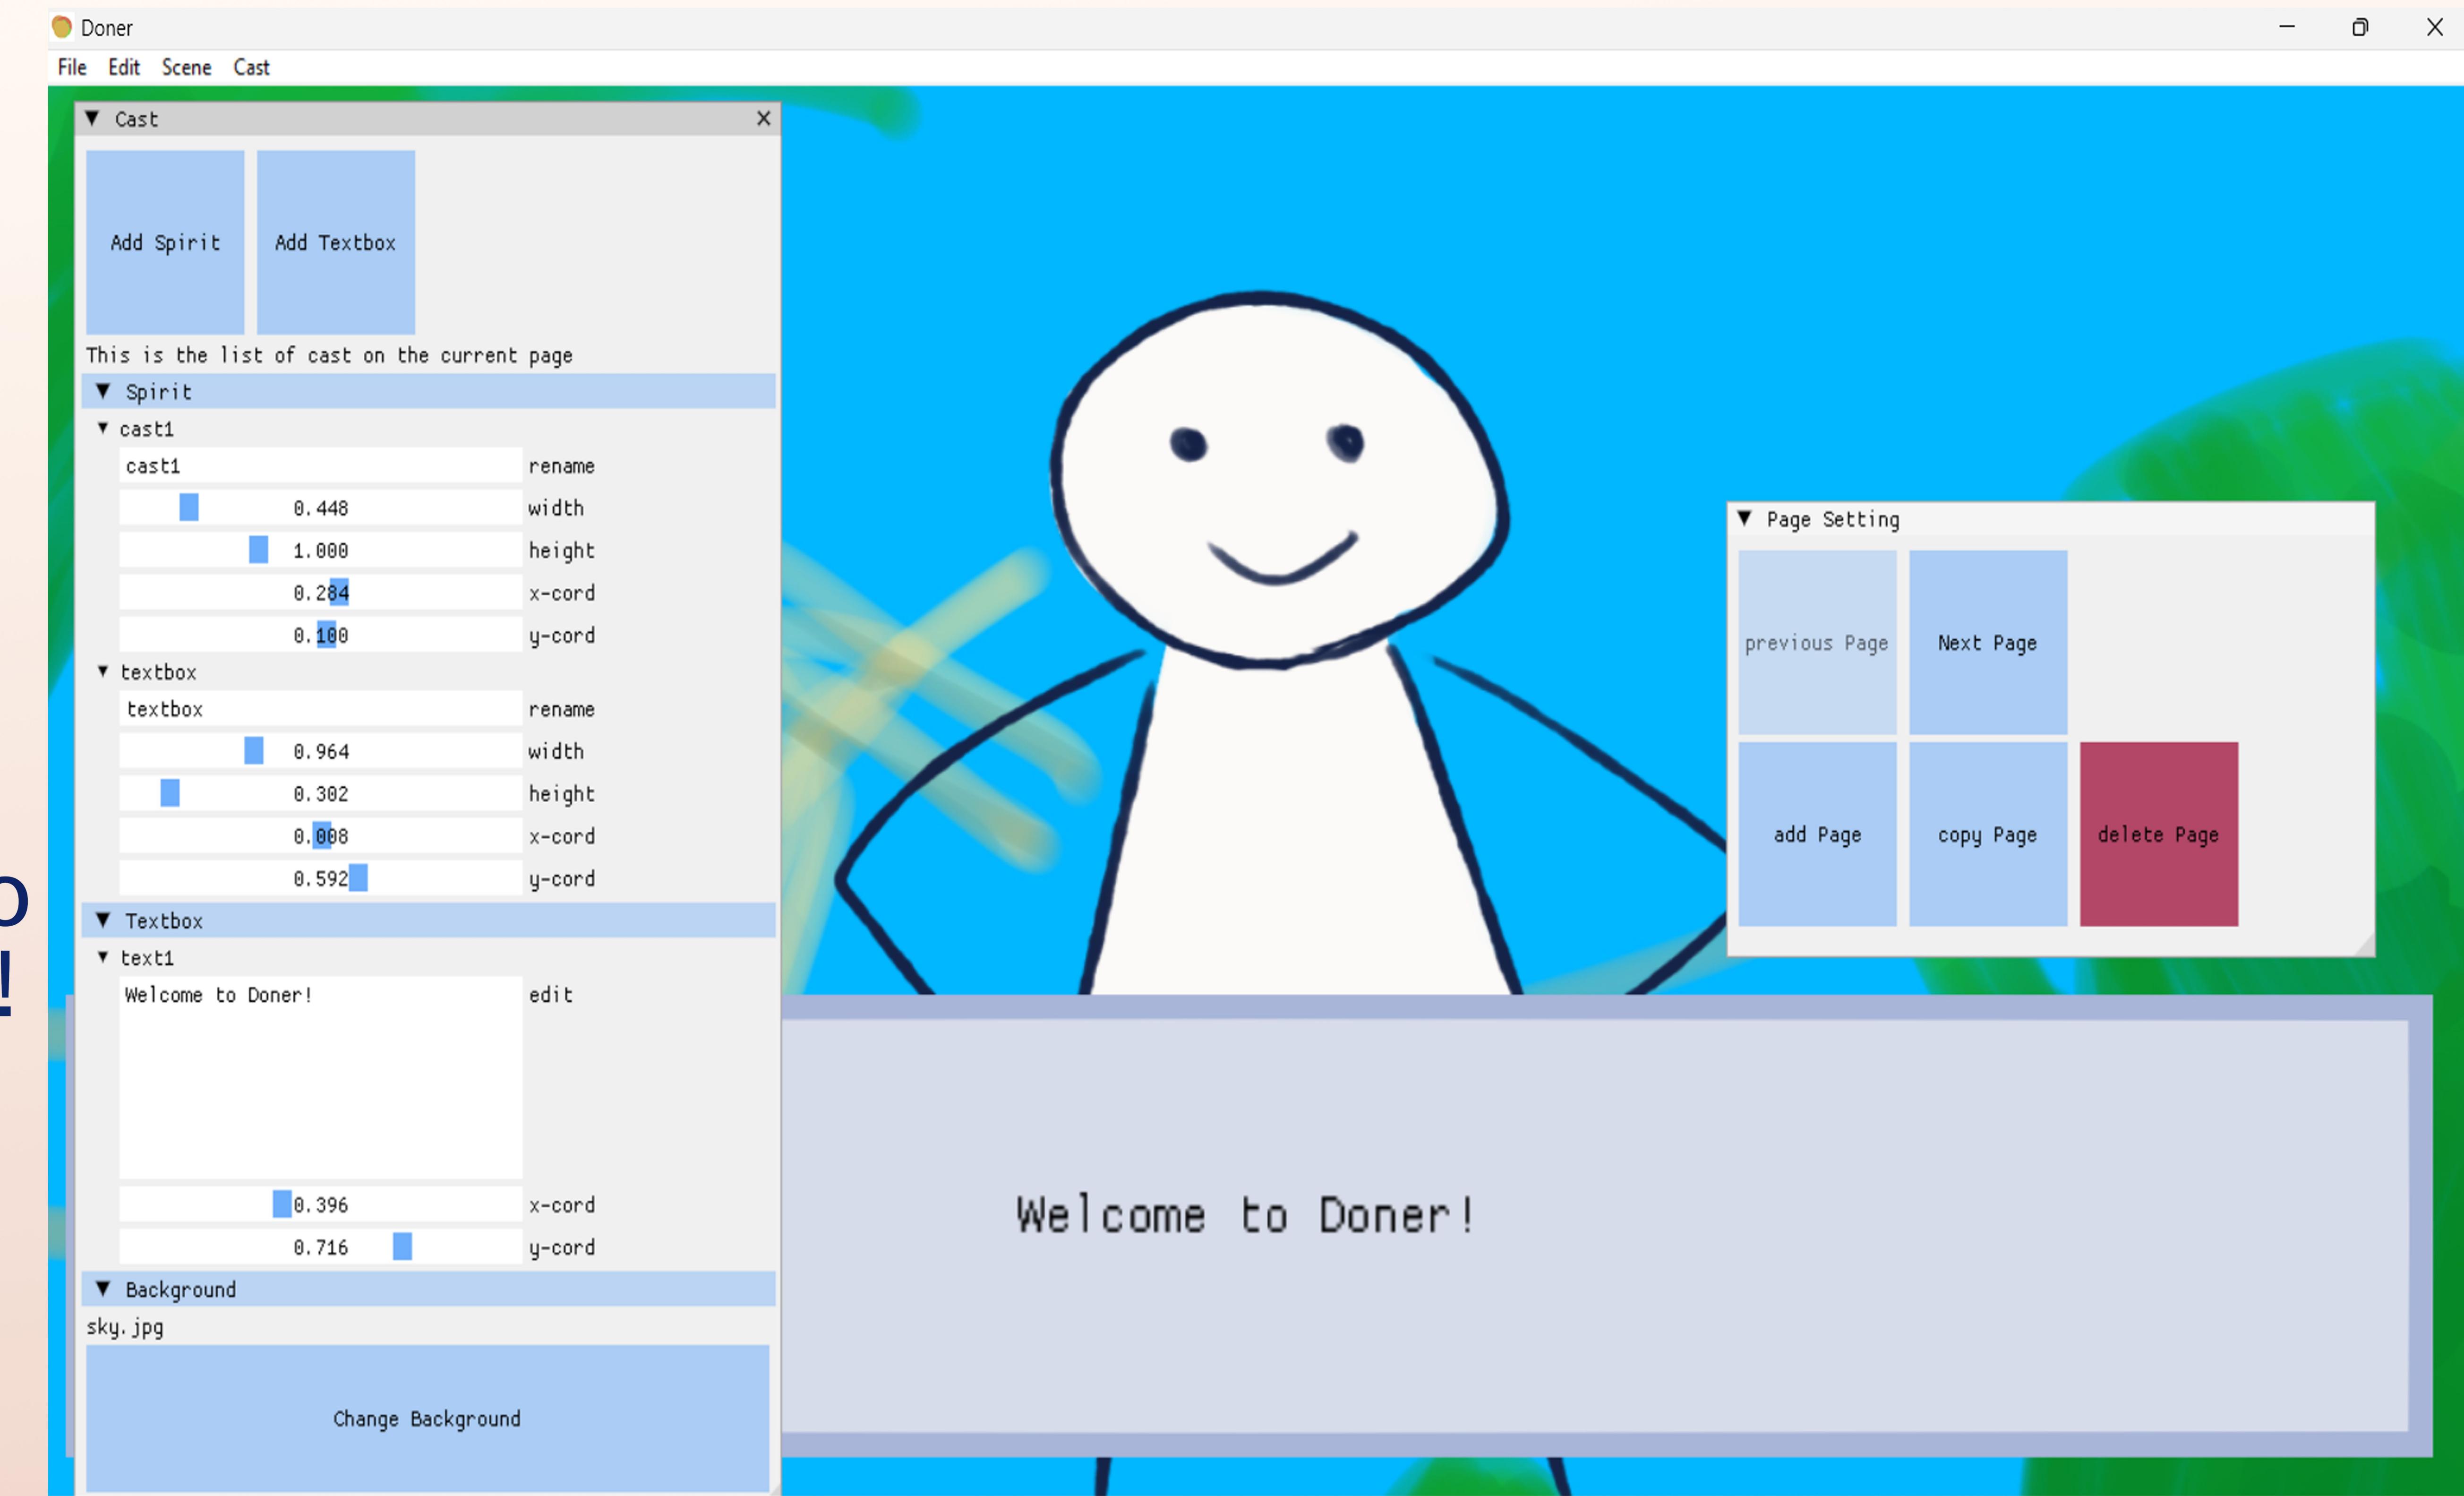

A Game engine for visual Novel

What is Doner?

Doner is a game engine for people who wants to create visual novels but have no programming language!

What is cool?

Doner provides a easy way to shape the scene users want! Adding, moving, changing, deleting... All could be done with just clicks and drag on the buttons!

Make your own layout:

The whole application is highly modifiable! With the DearImGui implementation, all the helper panel can be freely resize and move around. If you really don't want to see them, you can close them and find it in menu bar to open it again.

Now, why don't we have some Doner?
